Management’s Discussion and Analysis

For the Three Months Ended October 31, 2015

The following Management’s Discussion and Analysis (“MD&A”), prepared as at December 23, 2015 should be read in conjunction with the unaudited condensed consolidated interim financial statements of Superior Mining International Corporation (the “Company” or “Superior”) for the three months ended October 31, 2015 and the related notes thereto, which have been prepared in accordance with International Financial Reporting Standards (“IFRS”).

Reader may also want to refer to the July 31, 2015 audited financial statements and the accompanying notes.

This MD&A contains “forward-looking statements” that are subject to risk factors set out in a cautionary note contained herein. All figures are stated in Canadian dollars unless otherwise indicated.

Additional information related to the Company can be found on SEDAR at www.sedar.com and on the Company’s website at www.superiormining.com.

Company Overview

The Company is a Canadian company originally incorporated in the Yukon Territory, but now continued and registered as incorporated in British Columbia. It is listed on the TSX Venture Exchange under the symbol SUI. The Company is engaged in the acquisition and exploration of mineral properties in Australia and South Africa. To date, the Company has not earned significant revenues and is considered to be in the exploration stage.

The Company is in the process of exploring its mineral properties and has not yet determined whether the properties contain reserves that are economically recoverable or not. The recoverability of the amounts shown for mineral properties and related deferred exploration costs are dependent upon the existence of economically recoverable reserves, the ability of the Company to obtain necessary financing to complete the development of those reserves and upon future profitable production.

Outlook

The Company is continuing to explore its Redcastle project in Australia and is in the process of divesting its 87% owned Mangalisa gold reef property that is adjacent to Harmony Gold’s Masimong #5 Mine in the Free State goldfield of South Africa. At Mangalisa, two drilling programs have intersected a series of quartz conglomerate reefs with highly anomalous gold and uranium grades. The Company has been in discussion with several parties on a potential joint venture agreement to fund the phase 3 and subsequent follow-up phase 4 drill programs.

The Company continues to search for opportunities to acquire additional properties. In May 2012, the Company executed a Farm-In Agreement with a private Australian company to earn in a 51% interest in the Redcastle Project, located some 200 km northeast of Kalgoorlie, Western Australia. One shallow drilling program has been completed on the property and Phase 2 drilling program has been completed during the first week of May 2014. The property has potential for gold and nickel. The terms of the agreement require the Company to spend AUD\$200,000 before May 4, 2014. As at October 31, 2015, the Company had incurred \$366,722 of exploration expenditures on the project and therefore has earned its 51% interest in the project.

A 56 aircore drill program for 1268m was completed during the first week of May 2014. The aircore program was spaced on a 400m by 400m drill pattern and was drilled through the younger cover to bedrock. Drill sampling was consisted of 4m composites decreasing to a one metre interval at the contact of the younger sediments and the basement (interface).

The best result returned was 202ppb gold in drillhole RPA63 located at 6801400N and 391600E between 40-41m. Host rock is a saprock-zone komatiitic basalt. Several interface anomalies were located, extending 600m north and northwest of RPA63. Values ranged from 25ppb gold to 63ppb gold. Further infill aircore drilling is required to close in on a defined RC drill target.

SUPERIOR MINING INTERNATIONAL CORPORATION

Management’s Discussion and Analysis
For the Three Months Ended October 31, 2015

Exploration and Evaluation Assets

South Africa

Mangalisa

The mines of the Free State goldfield (the first of which was established in 1949) have collectively produced at least 320 million ounces of gold as well as a substantial amount of byproduct uranium. The gold and uranium ore has been recovered principally from the Basal Reef (a reef generally less than 1 metre thick), which is widespread in its distribution across the goldfield. A number of other reefs located above the Basal Reef, with more local or confined distribution, have also been mined in places. The other reefs include the Leader, “B”, “A”, and Beatrix reefs. The Basal, “B” and “A” reefs are all reported to be mined on the Masimong 5 mine immediately south of Superior’s property. Superior’s 198 km² Mangalisa license area is situated approximately 20 km to the east of the township of Welkom, and less than 10 km north of Harmony Gold’s operating Masimong #5 (formerly Erfdeel) gold mine. The contiguous, highly prospective ground was chosen for its potential to host eastward extensions of the western limb of the Free State Goldfield in the Welkom District. The lease dimensions contain approximately 18 kilometres of strike potential and approximately 10 kilometres of down-dip potential.

The Company’s objective has been to evaluate its property area using diamond drilling to determine whether one or more gold-enriched reefs occur, and thereafter to determine whether an economic deposit can be established. The Company’s exploration plans in conjunction with Minco Mineral Holdings (Pty) Limited (“Minco”) called for approximately eight phase 2 diamond drill holes of up to 1,000 m deep targeting the Erfenis Reef in the immediate area of the PG-1 discovery hole at Mangalisa.

On April 8, 2010, the Company executed an agreement with Minco pursuant to which Minco had the option to acquire 90% of the Company’s directly controlled shares in Turquoise Moon Trading 403 Pty. Ltd (“TMT”) by spending USD\$10,000,000 on the development of TMT’s Mangalisa project, of which USD\$5,000,000 had to be spent by April 2011. The Company holds a 74% direct interest in TMT and a further 13% indirect interest. If Minco had expended the full USD\$10,000,000 the Company’s direct and indirect interest in TMT would have been reduced to 20.4% (7.4% directly and 13% indirectly).

By the April 2011 milestone date, Minco had failed to meet the minimum exploration expenditure requirement and they forfeited their right to acquire an interest in the Mangalisa property.

During the year ended July 31, 2011, six phase 2 holes had been completed to the level of the Erfenis Reef horizon. The holes were drilled to a depth of approximately 1,000 m each, with four holes intersecting the Erfenis Reef Zone, including the discovery hole PG.1.

Significant intersections are as follows:

ERF.7	874.10 - 84.39 (0.29 m) @ 36.6 g/t Au & 0.24 kg/t U
PG.1/12	776.32 - 776.77 (0.45 m) @ 45.8 g/t Au & 3.79 kg/t U
(including)	776.56 - 776.77 (0.21 m) @ 91.8 g/t Au & 7.24 kg/t U
PG.1/13	776.13 - 776.45 (0.32 m) @ 51.1 g/t Au & 4.27 kg/t U
N.B.PG.1	is the Glencore discovery drill hole where the Company re-entered and completed several deflections from this drillhole.

The Company has now received and reviewed the geological technical report, based on the 43-101 format, which has incorporated all historic and current drilling with recommendations for the next phase of drilling.

The Company has been active in pursuing joint venture partners to invest in the Phase 3 and 4 drill programs to advance the project to an Inferred Resource stage. The Company executed an Earn-in Agreement on December 13, 2012 with Ibhubsei Capital (“Ibhubsei”), a private family investment Company with interests in mineral resources, energy and real estate, based in Johannesburg, South Africa pursuant to which Ibhubsei can acquire up to a 67%

SUPERIOR MINING INTERNATIONAL CORPORATION

Form 51 – 102F1

Management’s Discussion and Analysis

For the Three Months Ended October 31, 2015

interest in the Company’s Mangalisa project by paying Superior two cash payments totaling US\$2.5M and spending US\$5M on exploration within a 24-month period. During the year ended July 31, 2014, the agreement was terminated.

The Company executed a Sale Agreement on December 20, 2013 with Castlehill Trading CC (“Castlehill”), a private company based in Johannesburg, South Africa, pursuant to which Castlehill agreed to purchase the Company’s ownership in Mangalisa by acquiring all shares of TM, a subsidiary of the Company, which holds 87% ownership of Mangalisa for a total sum of USD \$3M. The agreement is subject to conditions precedent including satisfactory of due diligence, regulatory and shareholder approval. During the year ended July 31, 2014, the agreement was terminated.

The Company is negotiating to complete the sale of its 87% interest in the Mangalisa Project to a 3rd party.

Australia

Redcastle

On May 4, 2012 the Company executed a Farm-In/Joint Venture Heads of Agreement with a private Australian Company called Reinhold Resources Limited on their Redcastle property, located some 200 km northeast of Kalgoorlie, Western Australia. Under the terms of the agreement, the Company is required to spend AUD\$200,000 before May 4, 2014 to earn a 51% interest in the property of which the Company has now completed.

The property comprises 13 granted prospecting licences that cover 24 km² area over the prospective greenstone belt in the Eastern goldfields of Western Australia.

The Redcastle Project lies within the Murrin-Margaret area, which is a terrane of low strain greenstones and granitoids bounded by the Keith-Kilkenny lineament to the west and the Laverton Tectonic Zone to the east. There are three main lithological entities within the mapped portion of the project area:

- a greenstone sequence of tholeiite basalts with minor interflow sediments is intruded by gabbro and dolerite sills. The dolerite sills have pyroxenitic or gabbroic bases and quartz rich or more feldspar-rich tops;

SUPERIOR MINING INTERNATIONAL CORPORATION

Form 51 – 102F1

Management's Discussion and Analysis

For the Three Months Ended October 31, 2015

- the greenstones have been intruded by weakly porphyritic tonalite and dacite porphyry. The late stage dacite porphyry is confined to the periphery of the tonalite bodies which it intrudes, and the greenstones close to the tonalite contact. Regional metamorphism is lower greenschist facies; and
- tonalite and dacite have been intruded early in the structural evolution of the greenstone belt. They are foliated and folded with the greenstone sequence. Early isoclinal folds have been refolded into broad north-trending open folds with an amplitude of about four kilometres.

Gold mineralization is hosted in quartz veined faults and shears, where they transect favourable mafic lithologies, in particular dolerite and more specifically quartz dolerite. The intersections of early structures by later cross cutting faults, where mafic rocks are present, are important sites for gold deposition, as are quartz stockworks in tonalite. Considerable gold remobilization has occurred with depletion of gold from the laterite surface to a depth of approximately 8 to 15 m. Supergene enrichment has occurred near the base of the pallid zone, resulting in development of nuggets (as seen from the numerous "patches") and rich supergene gold as previously mined. Much of the early mining selectively targeted material containing these supergene enriched quartz veins, which were mined from between approximately 10 to 20 m below the Tertiary laterite surface; or down to 11 m below the present surface.

Geological mapping has been completed with updated mapping data provided in February 2013. See the Superior Mining web site (www.superiormining.com) maps page. Subsequent to the initial geological mapping, a soil geochemistry sampling program was completed in December 2012. A total of 319 soil samples were collected on a 200 m by 200 m grid pattern over most of the project area (24 km²). The last 2 km² to the northern boundary were not sampled because of a layer of transported overburden masking the area. This area was tested later with shallow phase 1 drilling.

The soil geochemistry sampling has indicated the background threshold is 2 ppb. There are several anomalous results above this threshold:

- The most significant result received is 102 ppb gold supported by 11 ppb some 280 m to southeast. These two values straddle a NW-trending porphyry dyke up to 100 m wide and 500 m long. Porphyries in the area are well known to contain gold mineralization.
- There are two lower order gold anomalies. The first is an 11 ppb gold anomaly located in the southeastern corner of the tenement (claim) block. This is supported by a 5 ppb gold anomaly 200 m to the east. The second is a 13 ppb gold anomaly that lies near a SSW-trending quartz vein that perhaps trends towards an abandoned shaft some 600m to the SSW.
- Other weak anomalies, ranging from 5 to 8 ppb, are scattered throughout the southern half of the tenement block. Many are associated with metal detector scrapings for alluvial gold.

A follow-up soil geochemistry sampling was carried out on a 25 m by 25 m grid pattern over the 110 ppb gold anomaly. Additional soil geochemistry was completed on a 50 m by 50 m grid pattern over the lower order anomalies. These follow-up sampling programs were undertaken concurrently with the first drilling program on the section of the property to the north that is overlain with a layer of transported overburden masking the area.

In total, 119 infill soil samples were collected around the gold anomalies highlighted in the December 2012 soil geochemistry program. The infill sampling confirmed the 102 ppb gold anomaly over porphyry from the December 2012 soil sampling program with sample RP399 assaying 208 ppb.

SUPERIOR MINING INTERNATIONAL CORPORATION

Form 51 – 102F1

Management's Discussion and Analysis

For the Three Months Ended October 31, 2015

The drilling program was designed to drill through the transported overburden to intersect the bedrock over the most northern 2 km from the property boundary. Granite was intersected under most of the area whereas basalt was intersected over the western portion. A 3 kg sample was collected every 4 m from the transported overburden and then a 3 kg sample was collected one metre into the rock interface. Anomalous gold values were intersected on the western portion. Most significant values returned in are:

Hole No.	Easting (m)	Northing (m)	Sample No.	From (m)	To (m)	Au (ppb)	Au-Rp1 (ppb)
RPR011	391,200	6,802,000	RP539	4	7	19	21
RPR012	391,600	6,802,000	RP541	4	5	26	28
RPR013	392,000	6,802,000	RP543	4	8	10	
RPR042	391,200	6,801,600	RP717	0	4	10	
RPR042			RP718	4	5	56	60
RPR042			RP719	5	6	53	45
RPR042			RP720	6	9	13	

Gold values assayed in parts per billion (ppb)

A full listing of soil sampling results and drilling results are available on the Company web site (www.superiormining.com).

The dominant lithology in the greenstone sequence is tholeiitic basalt and associated mafic intrusives. Quartz veins range up to about 1m thick and are the primary source of the gold.

The lateritic weathering profile is variably exposed. Small areas of lateritic residuum are probably present. Mottled zone, ferruginous saprolite, saprolite and saprock are more widespread. Transported overburden covers much of the northern half of the Redcastle tenements.

Recent soil cover and colluvium obscure much of the Archaean sequence in the southern half of the Tenements. Broad alluvial channels are common in the north.

A phase two, 56 aircore drill program for 1268m was completed during the first week of May 2014. The aircore program was spaced on a 400m by 400m drill pattern and was drilled through the younger cover to bedrock. Drill sampling was consisted of 4m composites decreasing to a one metre interval at the contact of the younger sediments and the basement (interface). Samples were analyzed for gold in parts per billion (ppb) by aquia regia digest at Intertek Laboratories in Maddington, Perth, West Australia.

Drilling was concentrated through the centre of the tenements and the northwest corridor.

SUPERIOR MINING INTERNATIONAL CORPORATION
Form 51 – 102F1
Management’s Discussion and Analysis
For the Three Months Ended October 31, 2015

The most significant gold values returned are:

Hole	East (m)	North (m)	Sampno	From (m)	To (m)	Au (ppb)
RPA056	391800	6802000	RP1048	8	12	20
RPA056			RP1045	6	7	38
RPA059	391200	6801800	RP1077	8	12	25
RPA060	391400	6801800	RP1089	6	7	34
RPA061	391600	6801800	RP1105	4	5	29
RPA061			RP1104	3	4	30
RPA062	391400	6801600	RP1121	6	7	55
RPA062			RP1120	4	6	66
RPA063	391600	6801400	RP1138	36	40	24
RPA063			RP1139	40	41	207
RPA068	393600	6797600	RP1185	0	2	20
RPA070	393400	6797400	RP1198	0	4	38
RPA071	393800	6736900	RP1210	32	33	49
RPA071			RP1214	35	38	55
RPA102	393600	6800395	RP1498	11	12	22

The best result returned was 202ppb gold in drillhole RPA63 located at 6801400N and 391600E between 40-41m. Host rock is a saprock-zone komatiitic basalt. Several interface anomalies were located, extending 600m north and northwest of RPA63. Values ranged from 25ppb gold to 63ppb gold. Further infill aircore drilling is required to close in on a defined RC drill target.

Superior plan to drill test the anomalous gold results from the last drill program when the sale of Mangalisa is completed and the funds are available. A close space drilling program of 100m by 100m will planned and will concentrate on the northwest corridor where the best gold results were obtained from the 400m by 400m drill program completed during May 2014.

Results of Operations for the Three Months Ended October 31, 2015:

During the three months ended October 31, 2015, the Company had a comprehensive loss of \$11,379 (2014 - \$33,130). Significant fluctuations occurred in the following categories:

- a) Share-based payments of \$644 (2014 - \$7,344) decreased as a result of a lower valuation of the stock options granted and vested to directors and officers of the Company.
- b) Professional fees of \$12,502 (2014 - \$14,171) decreased as a result of lower accounting and legal fees during the current period as the Company had minimal activities.
- c) Consulting fees of \$1,500 (2014 - \$7,016) decreased as a result of decreased activities in the Company.

Liquidity and Capital Resources

The Company’s cash position as at October 31, 2015 was \$10,472 an increase of \$5,550 from July 31, 2015. As at October 31, 2015, the Company had a working capital deficiency of \$1,753,121 (July 31, 2015 - \$1,704,259).

Net cash used in operating activities for the three months ended October 31, 2015 was \$18,483 compared to \$11,115 during 2014. The cash utilized by operating activities for the period consists primarily of the operating expenses and changes in non-cash working capital.

SUPERIOR MINING INTERNATIONAL CORPORATION
Form 51 – 102F1
Management’s Discussion and Analysis
For the Three Months Ended October 31, 2015

Net cash used for investing activities for the three months ended October 31, 2015 was \$nil compared to net cash used for investing activities for \$4,591 during 2014. The difference is attributed to the absence of cash expenditures on exploration and evaluation activities during the period.

Net cash provided by financing activities for the three months ended October 31, 2015 was \$4,485 compared to net cash provided by financing activities for \$20,000 during 2014. The Company received advances from related parties during the current fiscal period.

Related Party Transactions

Amounts paid or accrued to related parties are as follows:

		For the Period Ended October 31, 2015	For the Period Ended October 31, 2014
Key Management:			
Directors and officers	Share-based payments	\$ 664	6,855
		\$ 664	\$ 6,855
Related Parties:			
A firm in which the CFO is a partner	Professional fees	\$ 10,000	\$ 10,000
A company owned by the CEO	Exploration expenditures	38,147	27,000
		\$ 48,147	\$ 37,000

The amounts due to the related parties included in accounts payables and accrued liabilities are as follows:

	October 31, 2015	July 31, 2015
Due to a firm in which the CFO is a partner	\$ 296,006	\$ 286,006
Due to a director of a subsidiary of the Company	138,481	131,224
Due to a company owned by the CEO	546,099	507,934
	\$ 980,586	\$ 706,561

Other related party transactions

During the quarter ended October 31, 2015, the Company received an advance of \$4,485 from directors of the Company for working capital purposes.

During the year ended July 31, 2014, the Company received an aggregate amount of \$80,000 from the directors of the Company for loans bearing interest rate of 15% compounded monthly maturing June 25, 2016 for working capital purposes. In consideration for loans, the Company issued 320,000 common shares at a fair value of \$0.01 per share. For the period ended October 31, 2015, total interest expense related to the loans is \$3,541 (2014 - \$982).

SUPERIOR MINING INTERNATIONAL CORPORATION
Form 51 – 102F1
Management’s Discussion and Analysis
For the Three Months Ended October 31, 2015

Capital Management

The Company’s objective when managing capital is to safeguard the entity’s ability to continue as a going concern.

In the management of capital, the Company monitors its adjusted capital which comprises all components of equity (i.e. capital stock, reserves, equity portion of convertible debentures and deficit).

The Company sets the amount of capital in proportion to risk. The Company manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, the Company may issue common shares through private placements. The Company is not exposed to any externally imposed capital requirements. The Company’s policy remains unchanged from the prior year.

Financial Instruments

The Company’s financial instruments consist of cash, accounts payable and accrued liabilities, loans payable and the liability portion of convertible debentures. Unless otherwise noted, it is management’s opinion that the Company is not exposed to significant interest or credit risks arising from these financial instruments. The fair value of these financial instruments approximates their carrying value, unless otherwise noted.

The Company’s risk exposures and the impact on the Company’s financial instruments are summarized in Note 11 of the Company’s unaudited condensed consolidated financial statements.

Risks and Uncertainties

The Company may be exposed to risks of varying degrees of significance which could affect its ability to achieve its strategic objectives. The Company manages risks to minimize potential losses. The main objective of the Company’s risk management process is to ensure that the risks are properly identified and that the capital base is adequate in relation to those risks. The additional risks to which the Company is exposed are described below.

The Company’s operations and results are subject to a number of different risks at any given time. These factors, include, but are not limited to, disclosure regarding exploration, additional financing, project delay, price fluctuations and share price volatility, operating hazards, insurable risks and limitations of insurance, management, foreign country and regulatory requirements, currency fluctuations and environmental regulations risks.

The key determinants as to the Company’s operational outcomes are as follows:

- a) the state of capital markets, which will affect the ability of the Company to finance further mineral property acquisitions and expand its contemplated exploration programs;
- b) the prevailing market prices for base metals and precious metals;
- c) the consolidation and potential abandonment of the Company’s properties as exploration results provide further information relating to the underlying value of the properties; and
- d) the ability of the Company to identify and successfully acquire additional properties in which the Company may acquire an interest whether by option, joint venture or otherwise, in addition to or as an alternative to the property.

SUPERIOR MINING INTERNATIONAL CORPORATION

Form 51 – 102F1

Management’s Discussion and Analysis

For the Three Months Ended October 31, 2015

Exploration and Mining Risks: Exploration for mineral resources involves a high degree of risk. Few properties that are explored are ultimately developed into producing mines. The cost of conducting programs may be substantial and the likelihood of success is difficult to assess. The Company has limited financial resources and, as pointed out above, has no current source of recurring income with which to cushion financial setbacks. In future there is no assurance that the Company will produce revenue, operate profitably or provide a return on investment. The Company seeks to counter this risk as far as possible by selecting exploration areas on the basis of their recognized geological potential to host economic deposits. The focus of the Company is on areas in which the geological setting is well understood by management.

Metal Price Risk: Metal prices have historically fluctuated widely and are affected by numerous factors beyond the Company’s control, including international, economic and political trends, expectations for inflation, currency exchange fluctuations, interest rates, global or regional consumption patterns, speculative activities and worldwide production levels. The price of gold is affected by numerous factors beyond the control of the Company and can be extremely volatile. The price of this metal greatly affects the value of the Company.

Financial Markets: The Company is dependent on the equity markets as its sole source of operating working capital and the Company’s capital resources are largely determined by the strength of the junior resource markets and by the status of the Company’s projects in relation to these markets, and its ability to compete for the investor support of its projects.

Permits and Licenses: The Company’s operations may require licenses and permits from various governmental authorities. There can be no assurance that the Company will be able to obtain all necessary licenses and permits that may be required to carry out exploration, development and mining operations at its projects.

Industry: The Company is engaged in the acquisition and exploration of resource properties, an inherently risky business, and there is no assurance that an economic mineral deposit will ever be discovered and subsequently put into production. Most exploration projects do not result in the discovery of commercially mineable deposits.

Capital Needs: The exploration of the Company’s current and future properties will require additional financing. The only current source of future funds available to the Company is the sale of additional equity capital. There is no assurance that such funding will be available to the Company or that it will be obtained on terms favorable to the Company or will provide the Company with sufficient funds to meet its objectives, which may adversely affect the Company’s business and financial position. Failure to obtain sufficient financing may result in delaying or indefinite postponement of exploration activities on the Company’s properties or even a loss of a property interest.

Critical Accounting Policies

Reference should be made to the Company’s significant accounting policies contained in Note 3 of the Company’s audited consolidated financial statements. These accounting policies can have a significant impact of the financial performance and financial position of the Company.

Going Concern

The financial statements are prepared in accordance with IFRS on a going concern basis, which presume the realization of assets and discharge of liabilities in the normal course of business for the foreseeable future. In assessing whether the going concern assumption is appropriate, management takes into account all available information about the future, which is at least, but not limited to, twelve months from the end of the reporting period. Management is aware, in making its assessment, of material uncertainties related to events or conditions that may cast significant doubt upon the entity’s ability to continue as a going concern.

Management's Discussion and Analysis

For the Three Months Ended October 31, 2015

For the three months ended October 31, 2015, the Company incurred a loss of \$11,379 (2014 - \$33,130), had a working capital deficiency of \$1,753,121 (July 31, 2015 - \$1,704,259) and a deficit of \$19,100,999 (July 31, 2015 - \$19,140,362). The Company does not generate sufficient cash flow from operations to adequately fund its future exploration activities and has relied principally upon issuance of securities and loans from related parties to fund its exploration and administrative expenditures. The Company may also seek to option out its properties in order to generate cash flows. These conditions raise substantial doubt regarding the Company's ability to continue as a going concern.

The Company will require additional capital to fund its future property acquisitions and exploration programs as well as for administrative purposes. If the management is unable to obtain new funding, the Company may be unable to continue its operations, and amounts realized for assets may be less than amounts reflected in these financial statements.

The financial statements do not include adjustments to amounts and classifications of assets and liabilities that might be necessary should the Company be unable to continue operations.

New accounting standards and recent pronouncements

There are no IFRS or IFRIC interpretations that are effective August 1, 2015 that are expected to have a material impact on the Company.

Outstanding Share Data

As at the date of this MD&A, the Company has 57,886,479 common shares issued and outstanding and has the following options and warrants outstanding:

	Number	Exercise Price	Expiry Date
Options	2,580,000	\$ 0.12	September 29, 2016
	4,500,000	0.10	May 22, 2018
	<u>2,200,000</u>	0.05	March 16, 2019
	9,280,000		
Warrants	2,000,000	\$ 0.10	November 28, 2015

Fully diluted: 69,166,479

Off-Balance Sheet Arrangements

The Company currently has no off-balance sheet arrangements.

Cautionary Note Regarding Forward-Looking Statements

Certain of the statements made and information contained herein is “forward-looking information” within the meaning of the British Columbia Securities Act. These statements relate to future events or the Company’s future performance. All statements, other than statements of historical fact, may be forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as “seek”, “anticipate”, “plan”, “continue”, “estimate”, “expect”, “may”, “will”, “project”, “predict”, “propose”, “possible”, “potential”, “targeting”, “intend”, “could”, “might”, “should”, “believe” and similar expressions. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. The Company believes that the expectations reflected in those forward-looking statements are reasonable but no assurance can be given that these expectations will prove to be correct and such forward-looking statements included in this MD&A should not be unduly relied upon by investors as actual results may vary. These statements speak only as of the date of this MD&A and are expressly qualified, in their entirety, by this cautionary statement. In particular, this MD&A contains forward-looking statements pertaining to the following: capital expenditure programs, development of resources, treatment under governmental and taxation regimes, expectations regarding the Company’s ability to raise capital, expenditures to be made by the Company on its properties and work plans to be conducted by the Company. With respect to forward-looking statements listed above and contained in the MD&A, the Company has made assumptions regarding, among other things:

- uncertainties relating to receiving exploration permits;
- the impact of increasing competition;
- unpredictable changes to the market prices for minerals;
- exploration and developments costs for its properties;
- availability of additional financing and opportunities for acquisitions or joint-venture partners;
- anticipated results of exploration and development activities; and
- the Company’s ability to obtain additional financing on satisfactory terms.

The Company’s actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this MD&A and in the Company’s Management’s Proxy Circular which can be found on the SEDAR website (www.sedar.com): volatility in the market price for minerals; uncertainties associated with estimating resources; geological, technical, drilling and processing problems; liabilities and risks, including environmental liabilities and risks, inherent in mineral exploration and operations; fluctuations in currencies and interest rates; incorrect assessments of the value of acquisitions; unanticipated results of exploration activities; competition for, amongst other things, capital, undeveloped lands and skilled personnel; lack of availability of additional financing and farm-in or joint venture partners and unpredictable weather conditions.

Investors should not place undue reliance on forward-looking statements as the plans, intentions or expectations upon which they are based might not occur. Readers are cautioned that the foregoing lists of factors are not exhaustive. The forward-looking statements contained in this MD&A are expressly qualified by this cautionary statement. The Company does not undertake to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except in accordance with applicable securities laws.
